PROFESSIONAL SUMMARY

Cybersecurity and Data Science student at Monash University. My studies gave me the frameworks; real infrastructure migrations, live vulnerability identification, and briefing non-technical stakeholders on commercial risk made them real. I don't measure knowledge by what I've learned but by what it lets me do for others. I'm applying to Palo Alto Networks because I want that same experience at a scale where the stakes actually matter.

EDUCATION

Monash University | Melbourne, Australia

Expected Graduation: Nov 2027

Bachelor of Computer Science

- Academic Standing: GPA: 3.778 / 4.0 | WAM: 87.3
- Specialization: Data Science & AI | Major: Cybersecurity
- Core Competencies: Network Infrastructure & Systems Administration, Software Security & Threat Modeling, Algorithmic Efficiency, Relational Database Architecture.
- Relevant Coursework: OSI and TCP/IP Network Architectures, LAN/WAN Configuration, Vulnerability Analysis, Cryptographic Protocols, Secure Software Development, Advanced Data Structures.

PROFESSIONAL EXPERIENCE

ProCare Solar | Melbourne, Australia

Apr 2026 to Present

Technical Advisor & Digital Infrastructure Specialist

CASUAL

- Led a comprehensive digital infrastructure audit and penetration test, proactively identifying and eradicating 7 Critical and High-severity vulnerabilities, including exposed Webhooks and unpatched CVEs.
- Architected and executed a secure cloud migration to Vercel, reducing mobile Total Blocking Time (TBT) by over 90% and achieving verified 100/100 Lighthouse scores for Accessibility and SEO.
- Authored and presented liability and technical debt reports to non-technical business owners, translating complex cybersecurity risks into commercial impact.

North Shore Coaching College | Melbourne, Australia

Feb 2026 to Present

Primary & High School Tutor

CASUAL

- Acted as the primary point of contact for parents and faculty, providing regular progress reports and translating academic metrics into clear, actionable feedback.
- Translated complex academic subjects into accessible frameworks for diverse student cohorts, managing concurrent stakeholder communication across parents, students, and faculty simultaneously.

TECHNICAL PROJECTS

Wrought-Iron (Secure Data Wrangling & Analysis Desktop Application)

Tech Stack: Rust, Python, Django, SQLite, HTML, CSS, JavaScript, PyInstaller

- Architected and shipped a cross-platform desktop application using a Rust/Python hybrid backend and a Django web framework layer, packaged into native executables for both Windows and macOS.
- Delivered a production-ready, security-hardened tool across 3 versioned releases, explicitly auditing and eliminating backdoor vulnerabilities between build iterations, demonstrating an end-to-end understanding of secure software development lifecycle (SSDLC) principles.

SKILLS

- **Sales Engineering & Business:** Stakeholder Communication, Risk/Liability Translation, Technical Mentorship, Client-Facing Discovery.
- **Technical & Networking:** Python, SQL, Linux/Bash, Wireshark, Cisco Packet Tracer, TCP/IP & OSI Models, LAN/WAN Architectures, Threat Modeling, Cryptographic Protocols, Git
- **Technical Translation & Communication:** Linguistics and music background enabling rapid pattern recognition across complex system architectures and fluent translation of technical concepts into business language.
